

Monty's Plant Food

- **Highly Concentrated = Value to customer!**
- **Profitable!! 50% GPM on all products**
- **Not sold in National Mass Merchant Retailers**
- **NO competitive price issues!**

Monty's Plant Food is a unique and enhanced plant food. This product supplies and enables other nutrients to become available to the plant promoting stronger, more productive growth. It can be used in the root zone but used as a foliar spray is the most effective and efficient method of application. It is a very concentrated liquid plant food of unsurpassed quality at an unparalleled price. Monty's Plant Food is a combination of quality ingredients, and has been formulated to promote faster root development, stronger plant growth and increased plant yields. It contains a unique processed humic substance which buffers against burning and is a soil conditioner.

Display unit holds 80x 8 oz bottles and uses only 1 sq. ft. of floor space!

Gardener's Choice™

Natural Pest Controls

Rose & Flower 3-in-1 Spray
Insecticide, miticide & fungicide.
Use every 7-14 days.

Beneficial Insects are the right choice for garden & greenhouse pest solutions

Shipped dormant or sold as mail-back card program

You control the release time and reap the best of beneficials!

Live Beneficial Insects

Lady Bugs

When released at sundown (because they don't fly at night) Lady Bugs will eat aphids, soft scale, and other destructive soft-bodied garden pests. And... they keep on eating until the bad bugs are gone laying their eggs in the process. When new pests arrive, fresh ladybugs will be waiting.

Praying Mantids

Praying Mantids are ferocious looking creatures that eat beetles, caterpillars, aphids, grasshoppers, and anything that falls or walks in front of it! They are so much fun to watch that people buy them as pets! And since they don't fly, they remain in the area where they are released.

Flea Destroyer

100% natural beneficial nematodes. Easy to use apply by mixing with water to treat specific area. Kills fleas in yard and garden where they breed and is completely harmless to people and pets.

Lady Bug, Praying Mantid, and Flea Destroyer Displays are living containerized insects (lady bugs are hatched, mantids are unhatched) that ship to you in a 'dormant' state and display well in their containers for several weeks. Your customer buys them live for immediate release in their home garden. (Release instructions printed on the containers).

Green Lacewings & Trichogramma

Green Lacewings

These larvae are ferocious predators, feeding on many kinds of aphids, plus mealybugs, scale, whitefly larvae, mites, thrips and more. Known as the 'aphid lion', they can eat up to 1000 insects per day!

SOLD IN 'MAIL-BACKS'

Trichogramma

This is the most widely used beneficial insect in the world, attacking over 200 kinds of moths and leaf-eating caterpillars, including tomato hornworms, bollworms, gypsy moths, and more.

SOLD IN 'MAIL-BACKS'

Encarsa Formosa

A parasite of the GREENHOUSE WHITEFLY. These tiny wasps about the size of a pencil dot are completely harmless to people and pets. They attack only immature whitefly by laying their eggs inside the whitefly scale. The Encarsia hatch, feed and mature inside the whitefly therefore killing it within 20-25 days. The Encarsia then emerge as adults, mate and begin the parasitic cycle again.

SOLD IN 'MAIL-BACKS'

Green Lacewings, Trichogramma, and Encarsa Formosa are sold as 'Mail-Back' Display Cards. Your customer purchases the pre-addressed, postage-paid card from your retail display and mails it when they are ready to receive their live insects by mail (arrives to them within 14 business days).

Plant Pro-Tec™ Repellents

Effective pest control that is safe for people, pets & the environment.

Deer & Rabbit Repellent

- Effective up to 8 months after activation.
- Easily attaches to plants or fence.
- Safe, organic ingredients.
